III. Scope and Content. (Continued).

The bulk of the written material (to, from, and about WNH) dates from 1870 to 1884. It consists of personal correspondence between WNH and his wife, Katharine L. (Smith) Hill, scientific correspondence between WNH and leading scientists and ordnance specialists of the day; correspondence with influential figures (political, military, and scientific) with regard to WNH's application for an appointment as Professor of Mathematics in the Navy; business correspondence (personal and commercial) between WNH and business acquaintances.

Some of the more important historical figures included in the collection as recipients and/or authors are the following: Lammot duPont, explosives industrialist; Henry L. Abbot, Gen., ordnance specialist; Oliver Wolcott Gibbs, professor, Harvard University; Levi Parsons Morton, U.S. vice-president; John Trowbridge, professor, Harvard University; and John T. Wilder, Gen., mining industrialist, North Carolina.

IV. Correspondence.

(N.B.: The following special symbols are used to indicate specific sources for some of the WNH material: "W" - WNH letter press book with inclusive dates: June 1877 to August 1800; "W" - WNH letter press books with inclusive dates: 1874 - 1884; "S" - Mrs. K. L. Hill's scrapbook.)

1879 Aug 23 Whitestone, N.Y. ALS 2p W.N.Hill
school, and subsequently assistant to Dr. J. Law-
rence Smith at Louisville, Ky. In 1839 he was
appointed chemist at the United States torpedo
station at Newport, R. I., and in 1831 he became
chemist at the Repouso Chemical Works, Gulf Har-
town, N. J., and later superintendent. While at-
tached to the torpedo station he published a num-
ber of papers that gave him a reputation as an
expert on explosives without an equal in the
United States and with but few peers in Europe.
He was the author of "Liquid Carbonic Acid"
(1825), "Notes on Certain Explosive Agents"
(1826), "Electro-Dynamometer for Measuring Large Currents"
(1826), and "On the Heat Produced in Iron and Steel by Reversals of Magnetism" (in association
with Prof. John Trowbridge, 1833). He was the
inventor of an improvement in machines for mak-
ing liquid carbonic acid, an improvement in blast-
ing compounds or dynamites, improvements in
methods for heating gas for motive power, also
the process and apparatus for the production of
nitroglycerine, and an apparatus and method of demagnetizing, which had for its object the pro-
duction of heat without the use of fire, in order to
heat gaseous matter to be employed in motors.
He was a fellow of the American Association for
the Advancement of Science and a member of the
American Chemical Society. He was married in
Newport, R. I., Dec. 26, 1877, to Katharine L.,
daughter of Augustus W. Smith. They had three
children, Perry Child, Katharine L., and Katharine
Ledyard. Mr. Hill was killed by an explosion of
nitroglycerine at the Repouso Chemical
Works, Mar. 29, 1884.

C. LEBEL.

The etching, and one artist, was born in
the village of Emigen, near Reutlingen, Württemberg,
May 24, 1810. He was brought to the United
States at an early age, by his parents, who first
settled in Pennsylvania, Pa., but afterward in
Fredericksburg, Va. While attending his father
during a prolonged sickness, the son amused him-
self with drawing. His talent met with en-
couragement, and under the instruction of a com-
petent master he soon attained such a degree of
skill that a publisher engaged him to paint the
heads of eminent Americans to be en-
graved for a national work. For this purpose he visited
Washington, but the proj-
et failed, and he was
obliged to return to Vir-
ginia. There he gave him-
selves to diligent study, and
about 1840 produced "An
Indian Gazing at the Set-
ing Sun. The merits of
this painting procured him
orders to visit Eu-
rope, and in 1841 he went
to Germany and entered
the Düsseldorf Academy as a pupil of Lessing. A series
of dramatically conceived
and carefully elaborated
pictures were procured, which were published in rapid
succession, and established
the reputation of their au-
thor as a master of historical painting. Among
these were "Columbus Before the Queen," "Col-
umbus at Barcelona," "Landing of the Norse-
men in America," "Cromwell and His Daughter,"
"The Court of Queen Elizabeth," "The Iconoclasts,"
"The Flight of the Puritans," "The VIII and
Anne Boley," "Knox and Mary Stuart," "The
Attainder of Stafford," "Columbus Before
the Council of Salamanca," and "Columbus in Chains,"
for which he was awarded the gold medal at the
Brussels art exhibition. In the meantime Leube
visited Italy and Germany, and study-
ing the works of Raphael, Titian, Michael
Angelo, Cornelius and Kaulbach, and, after return-
ing in 1858 to Düsseldorf, produced a new series of
historical paintings, among which are many
recording memorable events of the American
revolution. Such are his "Sergeant Jasper,"
"Towns from Lexington," and "Mrs. Schuyler Firing the
Wheat Fields," "Washington Crossing the Dels-
ware," "Washington at Monmouth," "Washington
at Princeton" and "Washington at the Battle of
Monongahela." In 1869 Leube returned to the
United States, where many private and govern-
ment commissions awaited him. In 1860 he began
the execution of the large fresco painting which
adorns one of the staircases in the capital of
Washington, and represents, allegorically, western
emigration as a primary cause of our national
growth; it is entitled "Westward the Star of Empire
Takes Its Way." His other successful works in-
clude "Elaine," "Lafayette in Prison at Olmütz
Visited by His Relatives," "Storming of Teocalli,
Méxican War," "Mary Stuart," "The Nile," "The
Mother," "Mary Stuart Hearing the First Mass at
Holyrood After Her Return from France," "Spray
and Bubbles," "Unexpected Friends," "Prairie
Bluffs," "The Triumph of the Cross," "Hester
Prynne," "Nurse and Child," "Boy and Dog,"
"Venetian Maskers," "Torquemada and the Em-
sketches and studies. Among the latter there is a
sketch in pencil for a large historical painting,
"The British, They are Intended for the Senate, Civiliza-
tion." In 1869 Leube was elected a member of the
National Academy of Design. He died in Washington,
D.C., July 20, 1891.

MURRAY, Grace (Peckham), physician, was
born at Killingly, Conn., Oct. 16, 1846, daughter of
Fenner Harris and Catharine Davis (Torrey) Peckham, and descendant of John Peckham, who
settled in Newport, R. I., in 1638, through whose
son, Stephen, she comes of a race of physicians.
Her great-grandfather was a noted physician of Windham county, Conn.; her father was
a prominent physician and surgeon in Prov-
dence, R. I., and both her brother, Fenner Harris,
and her sister, Katharine Torrey, are physicians.
She studied in the public schools of Providence,
and later at Mount Holyoke, where she was
graduated in 1867. She was graduated at the
Woman's Medical College of the New York Infirm-
ary in 1882 and was an intern of the New York
Infirmary for Women and Children for three
years. She began private practice in New York
in 1884, and also became an instructor in the
medical college of the New York Infirmary and
attending physician to the infirmary hospital.
She is the inventor of an instrument for testing
sensibility, called the aesthesiometer. She has
been a contributor to the "New York Medical
Record" and other medical journals, and has
written articles on health and hygiene in the
current popular publications of the day, beside
a number of articles of a purely literary char-
acter. She married, granting some years ago,
the first, especially from the medical
fraternity, while her original researches have
been recognized and quoted all over the world.
She is a member of the New York State and
County medical societies, New York Academy of
Medicine, New York Neurological Society and
Grant one of the commissioners of the District of Columbia. In 1883 he was sent by Pres. Arthur as U. S. minister to Peru, where he remained until his death. Mr. Phelps was married July 1, 1853, to Lucy, daughter of Capt. Maynolde, of the ordnance department, Washington, D. C. He died in Peru about 1885.

DRUM, Richard Coulter, soldier, was born at Greensburg, Westmoreland co., Pa., May 25, 1825, son of Simon and Agnes (Lang) Drum, and grandson of Simon Drum, who emigrated to America in 1722. He was educated at the county academy, and at Jefferson College, and on Dec. 8, 1846, he entered the United States army as a private in the 1st Pennsylvania volunteers. He was promoted throughout the war to the rank of lieutenant of the 9th United States infantry, Feb. 18, 1847. For gallantry at Chapultepec and at the capture of the capital, he was brevetted first lieutenant, and in February, 1848, was transferred to the 4th United States artillery. In 1856 he served as aide-de-camp to Gen. Harney on the Sioux expedition and during the summer in Kansas was on the staff of Gen. Persifor F. Smith; was assistant adjutant-general at the headquarters of the department of the West for two years, and was adjutant of the artillery school at Fort Monroe, 1856-60. At the outbreak of the civil war he was appointed assistant adjutant-general of the United States army, and was assigned to the 24th division under Gen. Sumner and Wright, remaining until 1862, when he was transferred to the division of the Atlantic under Gen. George Meade. During the war he was successively promoted captain (May 14, 1861), major (Aug. 3, 1861), lieutenant-colonel (July 17, 1862), and colonel by brevet (Sept. 24, 1864). On Mar. 13, 1863, he was brevetted brigadier-general for faithful and meritorious services in the adjutant-general's department. He afterward continued service in the same department, stationed at Philadelphia during 1866-68, and at Atlantic City in 1868-69. On Feb. 22, 1869, he was promoted colonel, and in 1873 was assigned to the division of the Missouri under Gen. Sheridan. During the absence of Sheridan in 1877 he was in full charge of the division, and so ably handled the railroad riots in Ft. Wayne and Chicago, that he received the personal thanks of the secretary of war. He was senior assistant adjutant-general on duty in the war department, Washington, 1878-80; was chief of the weather bureau, 1880-88; and on June 15, 1889, he was appointed adjutant-general of the United States army, with the rank of brigadier-general, serving until his retirement, May 28, 1890. He was married in 1850, in Lebanon, daughter of Judge Thomas Gibbes Morgan, of New Orleans, La., and had two daughters.

WISTAR, Isaac Jones, soldier and lawyer, was born in Philadelphia, Pa., Nov. 14, 1807, son of Dr. Caspar and Lydia (Jones) Wistar, and a descendant of Caspar Wistar, who came from Heidelberg in 1717 and settled in Philadelphia; he acquired large bodies of land in New Jersey and Pennsylvania. Caspar Wistar built the first glass factory in America near Alloway town, a few miles east of Salem, N. J. He imported four expert glass makers from Rotterdam in 1738, and agreed to furnish the buildings, capital and materials, while the experts undertook to make glass, and to teach him and his son, Richard Caspar. The manufacture was carried on for a good many years by both father and son, and all kinds of glass were made. Isaac Jones Wistar was educated at Westtown and Haverford, and in 1849 traveled to California across the plains with a small party from Georgia. After a period of adventurous life in California and on the Pacific, he spent several years in the service of the Hudson Bay Co. in the far northwest. All except two of his party were killed during a night attack by the Indians, but he escaped seriously wounded, with the loss of his animals and outfit. Returning to California he studied law in San Francisco with Gwyn Page and with Joseph B. Crerock, later chief justice of the state, and established a practice. In 1861, with Edward D. Baker, his former law partner, then U. S. senator from Oregon, he raised under a personal order from Pres. Lincoln a regiment of sixteen companies, known as the California regiment. After severe losses in battle, this regiment became the 1st Pennsylvania. At the battle of Ball's Bluff, Va., Oct. 21, 1861, Baker was killed and Wistar was repeatedly and severely wounded. After his recovery he was brevetted as colonel. At the battle of Antietam, Sept. 17, 1862, in a desperate attempt to cover the retreat of his division the regiment was nearly cut to pieces. Col. Wistar was left for dead upon the field but was brought off under cover of night. For his gallantry on this occasion the citizens of Philadelphia presented him with a sword, and he was appointed brigadier-general. After commanding the eastern district of Virginia he took charge of several brigades and bodies of troops of all armies, and eventually the 24th division of the 18th corps. This division was commended by the secretary of war to congress, Dec. 5, 1863. After the war Gen. Wistar declined appointment in the regular army, and returning to Philadelphia, became president of the Union, later of the Pennsylvania Canal Co., and finally of all the canal and coal companies under the Pennsylvania Railroad Co., employing several thousand officers and men. He was president of the Philadelphia Academy of Natural Sciences for four terms, and the American Philosophical Society. He was the author of various scientific papers, and wrote extensively on penology, in respect of which he filled several honorary positions at home and abroad. In 1866 he donated the fine building for the anatomical museum (first established in 1808 by his collateral ancestor, Prof. Caspar Wistar), secured a corporate charter, and settled a liberal permanent endowment upon the "Wistar Institute of Anatomy and Biology." This, by far the most comprehensive anatomical collection in America, is an important adjunct to the University of Pennsylvania. Gen. Wistar was married, in Philadelphia, Pa., in 1802, to Sarah, daughter of Robert Toland of Philadelphia. She died in 1855, leaving no issue surviving.

HILL, Walter Nickerson, chemist, was born in Boston, Mass., Apr. 15, 1846, son of Albert Blake and Elvira Nickerson Hill, and a descendant of Moses Hill of Medway, Mass., whose ancestors served in the colonial and revolutionary wars. He was educated in Chauncy Hall School in Boston, and the Lawrence Scientific School of Harvard University, where he graduated in 1865 with the degree of Sc.B. magna cum laude. He became private assistant to Dr. Wolcott Gibbs, professor of chemistry in the Lawrence scientific
